

# Building Html Pages

For this project create three HTML files namely

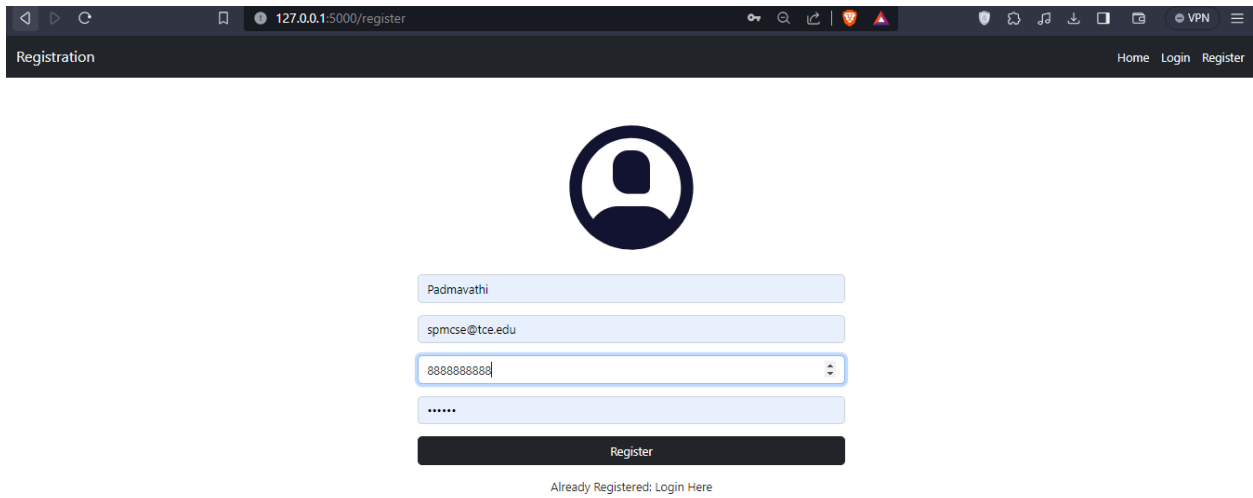

- **index.html**
- **register.html**
- **login.html**
- **prediction.html**
- **logout.html**

and save them in the templates folder.

Let's see how our index.html page looks like:

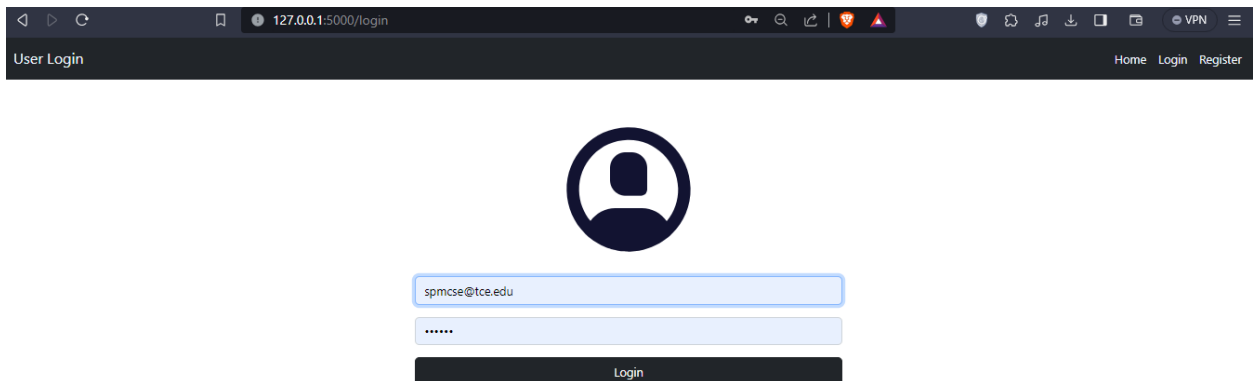

Let's look how our register.html file looks like:

The screenshot shows a web browser at the URL 127.0.0.1:5000/register. The page has a dark header with the title "Registration" on the left and navigation links "Home", "Login", and "Register" on the right. The main content area features a large circular profile icon placeholder. Below it are four input fields: a text field with "Padmavathi", an email field with "spmcse@tce.edu", a password field with "8888888888", and a confirmation password field with "\*\*\*\*\*". A dark "Register" button is positioned below the input fields. At the bottom, there is a link that says "Already Registered: Login Here".

-->

Let's look how our login.html file looks like:

The screenshot shows a web browser at the URL 127.0.0.1:5000/login. The page has a dark header with the title "User Login" on the left and navigation links "Home", "Login", and "Register" on the right. The main content area features a large circular profile icon placeholder. Below it are two input fields: an email field with "spmcse@tce.edu" and a password field with "\*\*\*\*\*". A dark "Login" button is positioned below the input fields.

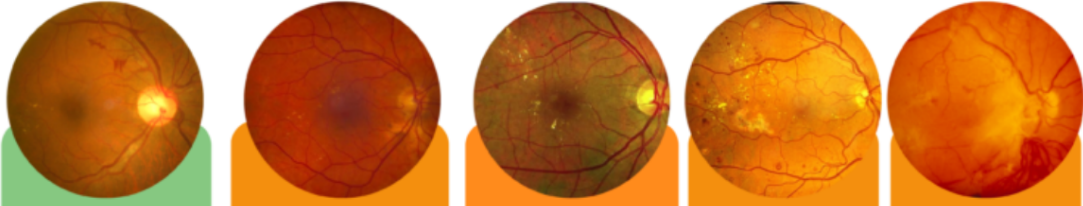

Now it will redirect to the prediction.html page.

Diabetic Retinopathy Classification Home Logout

Upload Image

Choose File 4c18115e-b288-433b-98dc-a55fbbe30516.jpg

Predict

No disease visible	Mild nonproliferative diabetic retinopathy	Moderate NPDR	Severe NPDR	PDR
--------------------	--	---------------	-------------	-----

When logout is clicked it redirects to the logout.html page.

127.0.0.1:5000/logout
